TITLE : POWER SOURCE CIRCUIT FOR CMOS LOGIC

ABSTRACT : PROBLEM TO BE SOLVED: To control a through-current in CMOS logic and to facilitate to control a consumption current.

SOLUTION: This circuit is provided with a serial circuit 1 obtained by serially connecting a P channel MOS transistor 1P undergoing diode connection and an N channel MOS transistor 1N undergoing diode connection to each other and a current source 2 serially connected to the serial circuit 1 between power supply terminals VDD and VSS and takes out CMOS logic, e.g. power supply for a CMOS inverter 4 from a connection point between the serial circuit 1 and the current source 2. Much of such logic are usually attached.
